01 Who You're Meeting

Mohamed Kande — Global Chairman, PwC.**In role:** Selected December 2023; four-year term began 1 July 2024, succeeding Bob Moritz**Today:** Leads the PwC network's integrated Network Leadership Team across more than 364,000 people in 151 countries, with AI capability, alliances and managed services as his investment priorities.

An electrical engineer turned consultant, and the first consulting partner to lead a network that has traditionally been audit-led — a structural fact about PwC worth understanding. He joined PwC in August 2011 from PRTM Management Consultants, where he was managing partner for Europe, the Middle East and South Asia, and before that worked at Motorola in Chicago and DTI Telecom in Canada.

Career: Global Chairman, PwC; Global Advisory Leader; co-leader, US Consulting Solutions, PwC; Chief Executive Officer, combined consulting businesses in the US, Mexico and Japan, PwC; US and Global Advisory Leader, technology, media, telecoms and hospitality, PwC**Education:** MBA, University of Chicago; MS Electrical Engineering, University of Montreal; Diplôme d'ingénieur, Electrical Engineering, ESIGELEC, France; Licensed CPA, Washington D.C. (2022)**The company:** \$56.9B of FY2025 revenue on 2.7% growth — the slowest of the Big Four — while cutting 5,600 roles and quietly dropping the previous leadership's pledge to add 100,000 people by mid-2026. Against that, it invested nearly \$1.5B in AI capability and upskilled over 315,000 of its own people.**What they sell:** Assurance, tax and legal, and advisory, with Strategy& as the premium strategy arm. New AI-specific services include Assurance for AI — independent assurance over whether AI systems are designed, deployed and operated responsibly.

02 Where The Company Sits

The most interesting thing PwC has built for an infrastructure portfolio is not a consulting practice but Assurance for AI — independent assurance over AI systems, which is a natural extension of audit into a domain most boards cannot yet evaluate. For a fund that has to give portfolio companies confidence their AI deployments are defensible, that is a distinct service from the implementation work every other firm sells, and it carries the independence question with it: assurance means something precisely because the assurer did not build the thing.

03 Talking Points

- An engineer by training in a network of accountants — he will engage on technology substance further than a typical Big Four chair.
- He built PwC's alliance strategy, so which technology partner PwC would deliver on is a question he can answer definitively.
- He has said publicly that PwC cannot hire enough AI engineers. Delivery capacity, not capability, is the constraint to probe.

What to pressure-test about the company:

- Slowest growth of the Big Four at 2.7% local currency — roughly half Deloitte's and KPMG's rates
- Headcount fell 5,600 and the previous pledge to add 100,000 people by mid-2026 was quietly dropped
- Asia revenue declined 4.1%, the only outright regional decline among the Big Four this cycle

04 GIP Context

GIP: No publicly disclosed GIP relationship. As with the other Big Four, check for an existing audit relationship at fund or PortCo level first — and note that if you want PwC's AI assurance work, that independence constraint cuts the other way and may be the point rather than the obstacle.**BlackRock:** No publicly disclosed operating relationship.www.pwc.com · [PwC appointment announcement](#) · [Milken Institute profile](#) · [Accounting Today coverage](#) · [Company LinkedIn](#)
