01 Who You're Meeting

Danai Mavunga — Chief Operating Officer, Sand Technologies.

In role: Chief Operating Officer at Sand Technologies

Today: Runs operations, coupling people and strategy to drive business performance across Sand's global delivery footprint.

More than a decade building systems and developing high-performing teams in high-growth organisations, with an unusual combination of global health and education experience before technology. She has worked with the World Health Organization and African Leadership University, and now Sand Technologies — so her background is in scaling delivery organisations across difficult operating environments rather than in software.

Career: Chief Operating Officer, Sand Technologies; Operations and organisational leadership, African Leadership University; Operations and systems roles, World Health Organization

The company: Private Physical AI vendor with deep emerging-market delivery reach via its ALX talent pipeline; deployed in 18+ countries with a services-heavy, project-based model rather than disclosed SaaS metrics.

What they sell: Symmetri — a real-time “Physical AI” control layer (Sense / Analyze / Act) that models physical assets and networks and can act on them directly, for water, energy, telecom, health and government operators.

02 Where The Company Sits

The category creator framing — “Physical AI” as sensing, modeling and directly acting on infrastructure. Smallest and least capitalized name on this list; its edge is emerging-market reach, not platform scale.

03 Talking Points

- The right counterpart for delivery model, team composition and how an engagement is actually staffed.
- Operations in global health means she has run programmes where failure has consequences; a realistic conversation about risk is available here.
- Sand is small relative to the integrators. Ask her directly about surge capacity and named-team continuity.

What to pressure-test about the company:

- Headcount down ~6% (6-mo) / ~9% (2-yr) per Simplify tracking, despite a growth narrative
- Revenue concentration in large infrastructure clients, which creates project-delay risk if deployments slip
- Analyst-rated C on Differentiation — crowded field vs. Palantir, C3.ai, Cognite, Bentley, AVEVA

04 GIP Context

GIP: No direct connection found. Sand is privately held with no disclosed GIP investment, and none of Sand's named customers appear on GIP's own portfolio-company list (airports, ports, rail, data centers, water/waste and energy assets).

BlackRock: No equity or ownership connection found. There is a real indirect link worth flagging, though: Sand's flagship water-utilities case study customer, Thames Water, has BlackRock as one of the senior creditor bondholders (alongside Aberdeen...

Others at Sand Technologies: Fred Swaniker (Founder & CEO); David Bratt (Chief Financial Officer); George Ionita (Chief Technology Officer)
