01 Who You're Meeting

Fred Swaniker — Founder & CEO, Sand Technologies.

In role: Founded Sand Technologies and has led it since

Today: Leads Sand Technologies, which he positions as the physical AI backbone for essential industries — converting real-world operations in utilities, telecoms, healthcare and smart cities into data-driven decisions.

A serial institution-builder rather than a conventional technology founder, and the talent pipeline behind Sand is his own creation. He began his career at McKinsey & Company and took an MBA at Stanford, where he was named an Arjay Miller Scholar. He has launched eight organisations across education, technology, talent and AI, most notably the African Leadership Group

Career: Founder & Chief Executive Officer, Sand Technologies; Founder, African Leadership Group (ALX, African Leadership University, African Leadership Academy); Founder, African Leadership University; Founder, African Leadership Academy

Education: MBA, Stanford Graduate School of Business (Arjay Miller Scholar); Bachelor's degree, Macalester College

The company: Private Physical AI vendor with deep emerging-market delivery reach via its ALX talent pipeline; deployed in 18+ countries with a services-heavy, project-based model rather than disclosed SaaS metrics.

What they sell: Symmetri — a real-time “Physical AI” control layer (Sense / Analyze / Act) that models physical assets and networks and can act on them directly, for water, energy, telecom, health and government operators.

02 Where The Company Sits

The category creator framing — “Physical AI” as sensing, modeling and directly acting on infrastructure. Smallest and least capitalized name on this list; its edge is emerging-market reach, not platform scale.

03 Talking Points

- The talent pipeline is the real structural differentiator — ALX feeds Sand directly. Test what that means for delivery cost and continuity on a long engagement.
- He frames Sand as physical AI for essential industries; that is a narrower and more testable claim than most vendors make. Ask for the utilities references specifically.
- McKinsey and Stanford GSB background means the commercial conversation will be structured, not evangelical, despite the mission framing.

What to pressure-test about the company:

- Headcount down ~6% (6-mo) / ~9% (2-yr) per Simplify tracking, despite a growth narrative
- Revenue concentration in large infrastructure clients, which creates project-delay risk if deployments slip
- Analyst-rated C on Differentiation — crowded field vs. Palantir, C3.ai, Cognite, Bentley, AVEVA

04 GIP Context

GIP: No direct connection found. Sand is privately held with no disclosed GIP investment, and none of Sand's named customers appear on GIP's own portfolio-company list (airports, ports, rail, data centers, water/waste and energy assets).

BlackRock: No equity or ownership connection found. There is a real indirect link worth flagging, though: Sand's flagship water-utilities case study customer, Thames Water, has BlackRock as one of the senior creditor bondholders (alongside Aberdeen...

Others at Sand Technologies: Danai Mavunga (Chief Operating Officer); David Bratt (Chief Financial Officer); George Ionita (Chief Technology Officer)
