Cloud orders with AI

€8.24B
Free cash flow

01 Who You're Meeting

Dominik Asam — Chief Financial Officer, SAP.
In role: CFO since 7 March 2023, succeeding Luka Mucic
Today: Owns SAP's finances through the cloud transition and the agentic pivot — a record €77B cloud backlog, free cash flow that nearly doubled to €8.24B, and the move toward outcome-based pricing.
An engineer turned industrial CFO, hired specifically for the combination of global finance and technology experience. He is a mechanical engineering graduate of the Technical University of Munich and École Centrale Paris, with an MBA from INSEAD. He held senior roles at Goldman Sachs and Siemens, then was CFO of Infineon Technologies from 2011, and CFO and Executive Committee member of Airbus from April 2019 — where he steered the company through the COVID-19 pandemic while driving business transformation. He also sits on the Supervisory Board of Bertelsmann.
Career: Chief Financial Officer & Executive Board member, SAP SE; Chief Financial Officer & Executive Committee member, Airbus; Chief Financial Officer, Infineon Technologies AG; Senior finance roles, Siemens
Education: MBA, INSEAD; Mechanical Engineering, Technical University of Munich and École Centrale Paris
The company: The dominant ERP vendor, with a record €77B total cloud backlog and Business AI included in two-thirds of Q4 2025 cloud order entry. Joule customer numbers grew ninefold across 2025, and SAP is now shifting its product roadmap from features toward autonomous agents.
What they sell: S/4HANA and the Cloud ERP Suite delivered through RISE with SAP and GROW with SAP, plus Business Data Cloud, the Business Technology Platform, and Business AI — the Joule assistant, Joule Work, the Business AI Platform, and the Autonomous Suite agents.

02 Where The Company Sits

SAP's structural argument is the one that matters most for asset-heavy businesses: general-purpose models cannot reach the business data that sits inside an ERP, and Joule can. Klein's own example is a customer win where SAP replaced a competitor by combining LLMs with its business data foundation to reinvent last-mile delivery logistics — a capability he argues competitors without deep ERP data cannot replicate. Two forward signals worth tracking.

03 Talking Points

- Airbus and Infineon before SAP — he understands capital-intensive industrial businesses, which most software CFOs do not.
 - A mechanical engineer with an INSEAD MBA and Goldman background: technically literate and commercially hard. Both halves of the conversation will be tested.
 - Outcome-based pricing has to work in his numbers before it reaches a contract. He is the person who decides whether it can.
- What to pressure-test about the company:**
- The share price fell sharply on Q4 earnings day — in some markets the largest single-day drop since 2020 — on near-term cloud backlog dynamics
 - Current cloud backlog growth decelerated through mid-2025, from 29% to 22%, which Klein attributed to tariff-driven uncertainty
 - Redirecting the development backlog from features to agents risks disappointing customers on conventional roadmap commitments

04 GIP Context

GIP: No publicly disclosed GIP relationship. SAP is the most likely core ERP at asset-heavy PortCos, which makes it a Corporate Functions Efficiency play in the reference model, and potentially an Asset Optimization one wherever operational data already sits inside the SAP estate.
BlackRock: No publicly disclosed operating relationship.
Others at SAP: Christian Klein (Chief Executive Officer)
