01 Who You're Meeting

Gina Mastantuono — President & Chief Financial Officer, ServiceNow.

In role: CFO since January 2020; promoted to the dual President and CFO role in January 2025

Today: Owns ServiceNow's financial strategy through the agentic transition — the Rule of 56 on the way to 60, a 31.5% operating margin, a 35% free cash flow margin, and the integration economics of Moveworks, Armis and Veza.

She joined ServiceNow as Chief Financial Officer in January 2020, weeks after McDermott arrived, and the two have run the company's growth phase together. Five years later she was given the dual President and CFO title, broadening her remit beyond finance at the point the company began acquiring aggressively and shifting toward consumption-linked AI pricing.

Career: President & Chief Financial Officer, ServiceNow; Chief Financial Officer, ServiceNow

The company: Growing subscription revenue at 24.5% at a scale approaching \$16B, with AI annual contract value passing \$1B and accelerating more than 40% quarter over quarter. Agentic deployments of ServiceNow AI increased ninefold in nine months, and more than 100 billion workflows run on the platform each year.

What they sell: The Now Platform for IT, employee, customer and creator workflows, extended into CRM and CPQ. The AI layer is Now Assist and AI Control Tower, with EmployeeWorks as the unified AI front door. Recent acquisitions add conversational AI and enterprise search (Moveworks), data cataloguing (data.world) and security (Armis, Veza).

02 Where The Company Sits

The AI Control Tower positioning is the thing to understand. ServiceNow is not trying to be the best model or the best agent — it is trying to be the governance and orchestration layer that sits above everyone else's agents, unifying legacy systems, departmental tools, cloud applications and AI agents into one pane of glass. For a portfolio with fragmented estates across many PortCos, that is a more relevant proposition than another model provider, and it maps directly to the Technology / Governance / Security prerequisite in the reference model.

03 Talking Points

- President as well as CFO — she has authority beyond the finance function, which makes her the efficient counterpart for a portfolio-scale agreement.
- ServiceNow is growing at 24.5% with margins expanding. There is no pressure to discount; structure and multi-year term will move further than price.
- Three acquisitions are being integrated at once. Ask how Armis and Veza licensing consolidates with the core platform before signing anything.

What to pressure-test about the company:

- The stock fell as much as 14% after Q1 2026 despite beating on nearly every metric — the market is discounting SaaS regardless of results
- Three acquisitions in quick succession (Moveworks, Armis, Veza) carry integration risk and near-term margin headwinds
- Growth includes meaningful inorganic contribution — roughly 125 basis points from Armis and 100 from Moveworks in FY2026 guidance

04 GIP Context

GIP: No publicly disclosed GIP relationship. ServiceNow is a plausible portfolio-level play precisely because it is estate-agnostic — it governs what is already there rather than requiring replacement. Note Cognizant holds ServiceNow Global Elite partner status if implementation capacity comes up.

BlackRock: No publicly disclosed operating relationship; standard index holdings of NOW only.

Others at ServiceNow: Bill McDermott (Chairman & Chief Executive Officer); Amit Zavery (President, Chief Product Officer & Chief Operating Officer); Pat Casey (Chief Technology Officer & EVP of DevOps)
