01 Who You're Meeting

Daniela Amodei — Co-Founder & President, Anthropic.

In role: Co-founded Anthropic in January 2021 and has been President since

Today: Runs the business — operations, people, finance, commercial strategy, enterprise partnerships and policy engagement. The counterpart for anything commercial; her brother owns research.

An operator rather than a researcher, which is why the division of labour at Anthropic is unusually clean. She built her career in operations, recruiting, risk management and people programmes — first at Stripe from 2013 to 2018 as a risk manager and lead technical recruiter, then at OpenAI from 2018, where she was an engineering manager over natural language processing and music generation teams, VP of People, and finally VP of Safety and Policy. She left with her brother and colleagues in late 2020 to co-found Anthropic and sits on its board.

Career: Co-Founder & President, Anthropic; Vice President of Safety & Policy, OpenAI; Engineering Manager, and VP of People, OpenAI; Risk Manager and Lead Technical Recruiter, Stripe

Education: BA, University of California, Santa Cruz

The company: Went from about \$1B to \$47B of annualised revenue in seventeen months, overtaking OpenAI on revenue in April 2026 and on valuation in May. Roughly 80% of revenue comes from business and API customers rather than consumers, which is the deliberate strategic choice behind the ramp.

What they sell: The Claude model family, sold through a direct API, Claude for Work, and the three major clouds. Product line as of mid-2026: Claude, Claude Code (agentic coding), Claude Cowork (desktop task automation for non-developers), Claude Design and Claude Science. Primary infrastructure partner is AWS, with availability on Google Cloud Vertex AI and Microsoft Azure.

02 Where The Company Sits

The enterprise-first thesis is the whole story here. Where competitors built consumer scale first, Anthropic priced and packaged for businesses, and the customer concentration reflects it — over 1,000 accounts spending more than \$1M a year, eight of the Fortune 10, and a documented lead in coding workloads. The offsetting structural point is accounting: Anthropic books cloud-reseller revenue gross, counting total end-customer spend as revenue and partner payouts as expense, which inflates the headline against peers reporting net.

03 Talking Points

- The right counterpart for a commercial or partnership conversation — Dario is the research voice, she is the business one.
- Her background is operations and people, so questions about delivery, support model and scaling will get substantive answers.
- She owns policy engagement, which matters if regulatory posture is part of your PortCo diligence.

What to pressure-test about the company:

- Gross revenue recognition on cloud-reseller channels inflates the headline relative to net-reporting peers — adjust before comparing
- Third-party run-rate figures (\$65B for July 2026) circulate widely and are estimates, not disclosures;
- Extreme capital intensity — roughly \$125B+ raised — with compute commitments that must be serviced regardless of demand

04 GIP Context

GIP: No publicly disclosed GIP relationship. Relevance to the portfolio is via the Individual Productivity and Corporate Functions Efficiency areas of the reference model, and increasingly Asset Optimization where agentic workflows touch operational data.

BlackRock: No publicly disclosed operating relationship. Anthropic is private; any BlackRock exposure would be through private-markets vehicles rather than index holdings, and is not publicly documented.

Others at Anthropic: Dario Amodei (Co-Founder & Chief Executive Officer); Krishna Rao (Chief Financial Officer)
