President & Chief Executive Officer, Amazon (AWS founder)

2006

Founded

~28%

Global cloud share

\$37.6B

Q1 2026 revenue

\$25B

AI revenue run rate

\$364B

Contracted backlog

01 Who You're Meeting

Andy Jassy — President & Chief Executive Officer, Amazon (AWS founder), Amazon Web Services.

In role: CEO of Amazon since July 2021

Today: Leads Amazon overall, and remains the most senior voice on AWS strategy and the capital programme behind it — he sets the capex envelope AWS builds within.

Founded and built AWS from an internal idea into the largest cloud business in the world, running it as CEO until succeeding Jeff Bezos as Amazon CEO in 2021. He recruited Matt Garman as an intern to the then-unnamed AWS project in 2005, which gives the current AWS leadership an unusually continuous lineage.

Career: President & Chief Executive Officer, Amazon; Chief Executive Officer, Amazon Web Services; Founder and leader of AWS, Amazon

The company: Holds about 28% of global cloud infrastructure against Azure's 21% and Google Cloud's 14%. The structural story is vertical integration: custom chips built over a decade now carry the majority of Bedrock inference, which converts directly into margin and price advantage as workloads shift from training to inference.

What they sell: Cloud infrastructure across 120 availability zones in 38 regions with 200+ services. The AI stack is Bedrock (managed multi-model inference), SageMaker (training), the Nova model family, and custom silicon — Trainium for AI, Graviton for CPU, Nitro for virtualisation.

02 Where The Company Sits

AWS is the default substrate rather than a differentiated AI vendor — for an infrastructure portfolio the decision is rarely whether to use it but how much concentration risk to accept. The genuinely distinctive asset is Trainium: it powers more than 50% of Bedrock token usage, saves customers 20–30% on inference against market alternatives, and underpins a chip portfolio past a \$20B annual run rate. The offsetting fact is that capacity is booked out to 2028, which weakens the buyer's negotiating position rather than strengthening it.

03 Talking Points

- Escalation point above Garman, not a day-to-day counterpart — reserve for portfolio-scale commitments.
- His public numbers set the frame for any AWS conversation; know the current capex and AI run-rate figures.

What to pressure-test about the company:

- \$200–220B of 2026 capital expenditure front-loads spend ahead of monetisation and compresses free cash flow
- Capacity sold out through 2028 removes buyer leverage and slows onboarding for new workloads
- Concentration risk cuts both ways — much of the AI revenue growth traces to a small number of frontier-lab counterparties

04 GIP Context

GIP: No publicly disclosed fund-level relationship. AWS is near-certain to already be present inside multiple PortCos, so the practical question is consolidated commercial terms across the portfolio rather than a first introduction.

BlackRock: No publicly disclosed operating relationship; standard index holdings of AMZN only.

Others at Amazon Web Services: Matt Garman (Chief Executive Officer, AWS)
