01 Who You're Meeting

Sanjay Sehgal — Founder, Chairman & Chief Executive Officer, Aziro.

In role: Founded the business in 2007 and has led it since

Today: Runs Aziro end to end — a roughly 1,200-person product engineering firm serving Fortune 500, Global 2000 and ISV clients — and drove its 2025 rebrand from MSys Technologies to an AI-native positioning.

A serial founder rather than a career executive, and the whole company reflects that. Before Aziro he built and ran several technology companies in the Atlanta area and abroad, including iVivity and Scentric — a software company building information management solutions, which he sold to a California storage and networking enterprise. In 2007 he co-founded Pramana, tackling online abuse and fraud for tier-one internet properties, raising over \$1.5M from angels plus about \$500K in State of Georgia grants, and served as its CEO and President. He became chairman, investor and co-founder of FarCare in 2011.

Career: Founder, Chairman & CEO, Aziro (formerly MSys Technologies); Chairman, Investor & Co-founder, FarCare Inc.; Co-founder, CEO & President, Pramana, Inc.; Founder, Scentric (sold to a storage and networking enterprise)

Education: BS, Electronics & Communications, Delhi College of Engineering

The company: A niche engineering partner rather than a scale integrator — roughly 1,200 people against Accenture's 799,000. Its stated focus is product engineering for enterprises, high-growth ISVs and AI-first companies, with storage, infrastructure and QA as the historical strengths carried over from the MSys years.

What they sell: Infrastructure engineering, digital engineering, AI/ML engineering, DevSecOps and AIOps, QA automation, hybrid and multi-cloud, and observability. Productised assets include Aziron (an enterprise agent execution platform), CAWi.ai, a RAG application framework, an AIOps accelerator and CodeLedger.

02 Where The Company Sits

Aziro competes on depth in a narrow band — infrastructure and storage engineering, QA automation, DevSecOps — not on breadth. For a portfolio programme that makes it a specialist supplier for defined engineering work rather than a transformation partner. The diligence caution is straightforward: nearly all published case studies are anonymised and vendor-reported, the revenue figure in circulation is a directory estimate rather than a disclosure, and the AI-native positioning is roughly a year old, so the track record behind it is short.

03 Talking Points

- Founder-led and founder-owned: he can make commercial decisions in the room, which no scale integrator's account lead can.
- Five companies founded, one sold — he thinks like an operator and an owner, not a services salesperson.
- Aziro publishes no financials and its case studies are anonymised. Ask for named references; he is the person who can grant them.

What to pressure-test about the company:

- Revenue figure in circulation is a third-party directory estimate and looks high against a ~1,200 headcount — verify directly
- Almost all case-study impact figures are vendor-reported and anonymised, with no independent validation available
- The AI-native brand is about a year old; the underlying business is a 2007-vintage engineering services firm

04 GIP Context

GIP: No publicly disclosed GIP relationship. At this size, an engagement would most plausibly arise at a single PortCo for a scoped engineering workstream rather than as a portfolio-level supplier.

BlackRock: None identified.
