01 Who You're Meeting

Christoph Schweizer — Chief Executive Officer, Boston Consulting Group.

In role: Elected 27 May 2021, effective 1 October 2021; BCG's seventh CEO

Today: Runs BCG globally. Under his leadership the firm has expanded its AI and broader technology capability substantially, including the launch of BCG X, its tech build and design unit.

A three-decade BCG insider who has spent his career on transformation work rather than pure strategy. He joined in 1997 and has advised clients across healthcare, private equity and other industries on major transformational programmes — AI and generative AI initiatives, growth strategies, M&A and post-merger integrations. Before becoming CEO he was BCG's Chair for Central and Eastern Europe and the Middle East, and he has sat on the firm's Executive and Operating Committees since 2014. He succeeded Rich Lesser, who moved to Global Chair.

Career: Chief Executive Officer, Boston Consulting Group; Chair, Central and Eastern Europe and the Middle East, Boston Consulting Group; Member, Executive and Operating Committees, Boston Consulting Group; Consultant to Senior Partner — healthcare, private equity, transformation, Boston Consulting Group

Education: MBA, McCombs School of Business, University of Texas at Austin; BA, WHU – Otto Beisheim School of Management, Koblenz

The company: \$14.4B of 2025 revenue across 33,500 people, with AI and technology services now over 40% of the total and AI-specific work at 25% — roughly \$3.6B. It is the first of the strategy firms to publish that figure, which makes it the benchmark the others get measured against.

What they sell: Strategy and transformation consulting, paired with BCG X — an in-house build arm that develops bespoke AI solutions and deploys industry platforms such as Auto AI, Retail AI and Deep Customer Engagement AI directly into client systems. The BCG X AI Science Institute launched in 2025.

02 Where The Company Sits

BCG's distinguishing move is structural, not rhetorical: BCG X means it builds and deploys into client systems rather than handing over a recommendation, which puts it in genuine overlap with systems integrators on delivery while retaining strategy-firm pricing. Its stated 10-20-70 allocation — 10% algorithms, 20% technology and data, 70% people and process — is a useful framing for anyone planning portfolio AI adoption, and matches the reference model's emphasis on adoption and change over model selection.

03 Talking Points

- Private equity is one of his own client sectors, so the PE operating model is familiar ground rather than something to explain.
- He published BCG's AI revenue figure when no peer had. Fair to ask what it includes — and to note Bain still publishes nothing.
- BCG X means he can commit to building, not just recommending. Test whether that extends to asset-heavy infrastructure, where BCG has no published platform.

What to pressure-test about the company:

- Growth slowed to 7% in 2025 from 10% in 2024, while AI revenue grew 25% — implying the non-AI business is close to flat
- Headcount grew only 500 in a year in which AI revenue grew 25%, which raises a question about delivery capacity or leverage
- Published AI platforms are automotive, retail and customer engagement — no infrastructure-sector platform is disclosed

04 GIP Context

GIP: No publicly disclosed GIP relationship. BCG's published AI platform portfolio skews to consumer-facing sectors, so relevance to energy, transport, digital and water assets would need to be tested rather than assumed.

BlackRock: None publicly disclosed.

Others at Boston Consulting Group: Rich Lesser (Global Chair (CEO 2013–2021))
