01 Who You're Meeting

Horacio Rozanski — Chairman, President & Chief Executive Officer, Booz Allen Hamilton.

In role: CEO since 1 January 2015, having previously been President and Chief Operating Officer

Today: Runs Booz Allen's national and international operations, sets business goals and growth strategy, and is steering the shift from staffed services toward products, outcome-based contracts and commercial critical-infrastructure cyber.

A thirty-year Booz Allen insider who started at the bottom of it. He joined as an intern in the firm's Buenos Aires office, was hired full time in 1992 as a consultant on marketing and channel strategy, and was elected vice president in 1999. He then held an unusual sequence of roles for a future CEO — Chief Personnel Officer from 2002, then Chief Strategy & Talent Officer, which put him at the centre of the 2008 separation of Booz Allen's core businesses and the Carlyle Group investment.

Career: Chairman, President & Chief Executive Officer, Booz Allen Hamilton; Executive Vice President & Chief Operating Officer, Booz Allen Hamilton; Chief Strategy & Talent Officer, Booz Allen Hamilton; Chief Personnel Officer, Booz Allen Hamilton

Education: MBA with high honours, University of Chicago Booth School of Business; BBA summa cum laude, University of Wisconsin–Eau Claire

The company: The largest pure-play US government technology firm, with deeper operational experience in critical national infrastructure than any commercial consultancy. FY2026 was, in its CEO's words, the most challenging year it has faced as a public company — revenue down 6.4%, headcount down 12% — while backlog hit a record \$38B.

What they sell: Mission technology for US federal agencies — AI, cyber, defence technology and digital transformation — delivered increasingly as products and outcome-based contracts rather than staffed services. Expanding into commercial critical infrastructure through the Defy Security acquisition.

02 Where The Company Sits

Of every firm in this set, Booz Allen has the most directly transferable experience in operating and defending critical infrastructure, because that is what federal mission work is. The strategic shift underway makes it more relevant to an infrastructure portfolio, not less: the Defy Security acquisition is explicitly aimed at scaling cyber product sales into commercial critical infrastructure, and it has built partnerships with NVIDIA, AWS, OpenAI and venture firms to pull commercial technology into that work.

03 Talking Points

- Came up through people and strategy rather than delivery, so workforce model and contract structure are his native subjects.
- He has publicly committed to breaking the link between headcount growth and revenue growth — directly relevant to how any services contract with them should be priced.
- Booz Allen's push into commercial critical infrastructure is early and he needs proof points. That is leverage.

What to pressure-test about the company:

- FY2026 revenue fell 6.4% to \$11.2B and Q4 fell 6.4% — described by the CEO as the most challenging year as a public company
- Headcount down 12% year over year, which constrains near-term delivery capacity
- Revenue remains overwhelmingly dependent on US federal budgets and procurement timing — a single shutdown moved \$110M around

04 GIP Context

GIP: No publicly disclosed GIP relationship. Its stated push into commercial critical infrastructure cyber makes it a plausible inbound approach rather than an outbound search — and its work sits closest to the Technology / Governance / Security prerequisite in the reference model.

BlackRock: No publicly disclosed operating relationship; standard index holdings of BAH only.
