01 Who You're Meeting

Aiman Ezzat — Chief Executive Officer, Capgemini.

In role: CEO since 20 May 2020, appointed under a managerial transition process begun in 2017

Today: Runs the Capgemini Group, and is steering the pivot toward AI-driven delivery — the WNS and Cloud4C acquisitions, the €700M restructuring programme, and a workforce now two-thirds offshore.

A finance and operations leader who has spent over two decades inside Capgemini and knows its economics intimately. He was Group CFO from December 2012 to 2018 and COO from January 2018 until becoming CEO. Earlier he was Deputy Director of Strategy from 2005 to 2007, working on the Booster turnaround of the US business and the development of offshore capability in India, and played an active part in acquiring and integrating Kanbay — the deal that accelerated Capgemini's Indian presence. He then ran the Financial Services global business unit, first as COO from 2007 and as Global Head from 2008 to 2012.

Career: Chief Executive Officer and Director, Capgemini SE; Chief Operating Officer, Capgemini SE; Group Chief Financial Officer, Capgemini SE; Global Head, Financial Services Global Business Unit, Capgemini

Education: MSc Chemical Engineering, École Supérieure de Chimie Physique Électronique de Lyon; MBA, Anderson School of Management, UCLA

The company: The largest European-headquartered integrator, and the one in this set with the most credible physical-engineering capability through Capgemini Engineering. 2025 was a year of aggressive reshaping: €3.8B deployed on acquisitions, headcount up 24%, and a €700M restructuring programme announced to reorganise the workforce around AI.

What they sell: Strategy, technology and engineering services plus digital business process operations. Distinct brands sit underneath: Capgemini Engineering (industrial and product engineering), Sogeti, frog, Cambridge Consultants and Synapse Product Development. WNS, acquired in 2025, added intelligent operations at scale.

02 Where The Company Sits

Capgemini is the integrator whose structure most closely matches infrastructure work — Capgemini Engineering does product and industrial engineering, not just IT, which is a different proposition from the India-heritage firms and from the Big Four. The 2025 numbers need reading carefully though: reported growth was 1.7% and the 10.6% Q4 acceleration came substantially from newly acquired units (WNS, Cloud4C) rather than the existing business. Net debt more than doubled to €5.3B funding those deals.

03 Talking Points

- Ex-CFO: lead with the commercial structure and the economics, not the capability deck.
- He built Capgemini's Indian offshore capability himself through the Kanbay deal, so the delivery model is his own design rather than inherited.
- Reported 2025 growth was 1.7%, not the 10.6% Q4 headline. He will know you know the difference.

What to pressure-test about the company:

- Reported growth was only 1.7%; the headline Q4 acceleration leaned substantially on acquisitions rather than the existing base
- Net debt more than doubled to €5.3B after €3.8B of acquisition spend
- Net profit fell 4.2% despite revenue growth

04 GIP Context

GIP: No publicly disclosed GIP relationship. Capgemini Engineering is the part worth testing for infrastructure assets — it addresses physical product and systems engineering rather than corporate IT, which maps to the Asset Optimization area of the reference model rather than Corporate Functions.

BlackRock: No publicly disclosed operating relationship; standard institutional holdings only.

Others at Capgemini: Nive Bhagat (Chief Financial Officer); Paul Hermelin (Chairman of the Board)
