01 Who You're Meeting

David Herzog — Chairman of the Board, DXC Technology.

In role: Chairman since December 2023, having been Lead Independent Director; board member since 2017

Today: Board leadership through the CEO transition and the current restructuring. His background is financial controls and insurance rather than technology.

A career financial executive from the insurance industry, and a Certified Public Accountant. He was Chief Financial Officer and Executive Vice President of American International Group from 2008 to 2016 — which means he was AIG's CFO through the aftermath of its rescue and restructuring. He had previously been AIG's Senior Vice President and Comptroller, CFO for worldwide life insurance operations, and CFO and COO of American General Life after AIG acquired it, with earlier executive roles at GenAmerica, Family Guardian Life and a large accounting firm now part of PricewaterhouseCoopers.

Career: Chairman of the Board, DXC Technology; Board member, latterly Lead Independent Director, DXC Technology; Chief Financial Officer & Executive Vice President, American International Group (AIG); Senior Vice President & Comptroller, AIG

Education: Certified Public Accountant; Fellow, Life Management Institute

The company: The smallest and weakest-performing of the large integrators tracked here. Revenue has declined organically in every quarter of FY2026 and Q4 EBIT turned negative at -\$39M. What it does have is deep ownership of client legacy estate — including the Hogan core banking code — which it is trying to monetise through AI-fronted interfaces rather than replacement.

What they sell: Managed infrastructure, application services, cloud operations, security, insurance software and analytics — largely running estate that clients have outsourced. Now organised into a Core Track (the existing business) and a Fast Track (new differentiated offerings), under an Xponential AI framework, with OASIS as its AI-based orchestration platform.

02 Where The Company Sits

DXC's relevance is specific and narrow: it holds and maintains legacy systems that other vendors would propose replacing. The Hogan strategy is the clearest example — rather than reviving or rebuilding the core banking platform, it is being extended through lightweight AI APIs, on the argument that owning and maintaining the code gives DXC a position no one else can take. For an infrastructure portfolio that framing matters wherever a PortCo runs unglamorous but critical legacy systems.

03 Talking Points

- Board, not executive — route everything commercial through Fernandez.
- A financial-controls specialist chairing a declining business: expect the board's focus to be cash, margin and balance sheet rather than growth narrative.
- Relevant if vendor financial viability becomes a genuine diligence question, which at DXC it reasonably might.

What to pressure-test about the company:

- Organic revenue declined in all four quarters of FY2026, worsening to 6.6% in Q4
- Q4 EBIT turned negative at -\$39M, a 111% year-over-year swing
- Bookings are inconsistent — Q2 book-to-bill of 0.85, Q3 bookings down 6% — so the turnaround is not yet visible in forward demand

04 GIP Context

GIP: No publicly disclosed GIP relationship. The likeliest route in is an inherited managed-services contract at a PortCo rather than a new selection. Given the revenue trajectory, contract renewal and service continuity are worth reviewing wherever DXC is already embedded.

BlackRock: No publicly disclosed operating relationship; standard index holdings of DXC only.

Others at DXC Technology: Raul Fernandez (President & Chief Executive Officer)
