01 Who You're Meeting

Raul Fernandez — President & Chief Executive Officer, DXC Technology.

In role: Interim President and CEO from December 2023; confirmed permanently in February 2024; board member since August 2020

Today: Leading DXC's repositioning through the Core Track / Fast Track split and the Xponential AI framework, while a declining top line is stabilised on margin and cash.

A founder and investor rather than a career services executive, which is why DXC reached for him from its own board. He founded Proxicom and grew it into a prominent global provider of e-commerce solutions to Fortune 500 companies, taking it public before Dimension Data acquired it; he then ran Dimension Data North America as CEO from 2000 to 2002. He was Chairman and CEO of ObjectVideo, an intelligent video surveillance software developer, from 2004 until its 2017 sale to Alarm.com. He served on President George W.

Career: President & Chief Executive Officer, DXC Technology; Interim President & Chief Executive Officer, DXC Technology; Member of the Board of Directors, DXC Technology; Chairman & Chief Executive Officer, ObjectVideo (sold to Alarm.com, 2017)

The company: The smallest and weakest-performing of the large integrators tracked here. Revenue has declined organically in every quarter of FY2026 and Q4 EBIT turned negative at -\$39M. What it does have is deep ownership of client legacy estate — including the Hogan core banking code — which it is trying to monetise through AI-fronted interfaces rather than replacement.

What they sell: Managed infrastructure, application services, cloud operations, security, insurance software and analytics — largely running estate that clients have outsourced. Now organised into a Core Track (the existing business) and a Fast Track (new differentiated offerings), under an Xponential AI framework, with OASIS as its AI-based orchestration platform.

02 Where The Company Sits

DXC's relevance is specific and narrow: it holds and maintains legacy systems that other vendors would propose replacing. The Hogan strategy is the clearest example — rather than reviving or rebuilding the core banking platform, it is being extended through lightweight AI APIs, on the argument that owning and maintaining the code gives DXC a position no one else can take. For an infrastructure portfolio that framing matters wherever a PortCo runs unglamorous but critical legacy systems.

03 Talking Points

- Investor and founder mindset — he will engage on value and asset economics, which is how he frames the Hogan legacy-code strategy.
- Private equity and growth equity advisory roles mean PE language is familiar; useful if the conversation is about a PortCo's cost base.
- DXC's revenue has declined every quarter of FY2026. He says so publicly, so raising it directly is fair rather than awkward.

What to pressure-test about the company:

- Organic revenue declined in all four quarters of FY2026, worsening to 6.6% in Q4
- Q4 EBIT turned negative at -\$39M, a 111% year-over-year swing
- Bookings are inconsistent — Q2 book-to-bill of 0.85, Q3 bookings down 6% — so the turnaround is not yet visible in forward demand

04 GIP Context

GIP: No publicly disclosed GIP relationship. The likeliest route is an inherited managed-services contract at a PortCo rather than a new selection. Given the revenue trajectory, contract renewal and service continuity are worth reviewing wherever DXC is already embedded.

BlackRock: No publicly disclosed operating relationship; standard index holdings of DXC only.

Others at DXC Technology: David Herzog (Chairman of the Board)
