~90%

Fortune 100 on Gemini Ent.

## 01 Who You're Meeting

**Sundar Pichai** — Chief Executive Officer, Alphabet & Google, Google.

**In role:** CEO of Google since October 2015; CEO of Alphabet since December 2019; Alphabet board member since 2017

**Today:** Leads Alphabet overall and sets the capital envelope behind Google Cloud and the Gemini programme — 2026 capital expenditure guidance of \$195–205B.

A product leader who became a platform CEO. He trained as a materials engineer at IIT Kharagpur, then took a master's at Stanford and an MBA at Wharton, working in engineering and product management at Applied Materials and then in management consulting at McKinsey. He joined Google in 2004 and led product management for its client software — Google Chrome and ChromeOS, and largely Google Drive — later overseeing Gmail and Google Maps, announcing the open-sourcing of the VP8 video codec and the WebM format in 2010, and taking on Android in 2013.

**Career:** Chief Executive Officer, Alphabet Inc.; Chief Executive Officer, Google; Product Chief; oversight of Android, Google; Product management — Chrome, ChromeOS, Drive, Gmail, Maps, Google

**Education:** BTech, IIT Kharagpur; MS, Stanford University; MBA, The Wharton School, University of Pennsylvania

**The company:** Google Cloud accelerated from 48% growth in Q4 2025 to 63% in Q1 2026 to 82% in Q2, with backlog reaching \$514B. Gemini processes roughly 22 billion tokens per minute through direct API use, and nearly 90% of the Fortune 100 use Gemini Enterprise.

**What they sell:** Google Cloud infrastructure and the Gemini model family, plus the Gemini Enterprise Agent Platform (formerly Vertex AI), Workspace Studio for no-code agent building, and custom silicon — Ironwood TPUs, with an eighth generation splitting into Broadcom-designed training chips and MediaTek-designed inference chips.

## 02 Where The Company Sits

Kurian's competitive argument is that rivals hand customers components rather than an assembled platform, and the vertical integration behind that claim is real — Google is the only player owning custom silicon, frontier models, developer platform and consumer distribution under one roof. For an infrastructure portfolio, two commercial mechanics matter more than the architecture: Kurian has said most Google Cloud infrastructure contracts run about five years, and that customers committing \$100 of spend typically end up spending more than \$150.

## 03 Talking Points

- Escalation point above Kurian rather than a working counterpart — reserve for portfolio-scale or strategic conversations.
- His 10% engineering productivity figure is one of the few concrete AI productivity claims from a major CEO; a good reference point for setting PortCo expectations.
- Consumer and advertising exposure means Alphabet's risk drivers differ from a pure enterprise vendor's; the enterprise relationship sits inside a much bigger business.

**What to pressure-test about the company:**

- 2026 capital expenditure guidance raised to \$195–205B, and free cash flow turned negative in Q2 2026
- Backlog figures vary noticeably between sources and presentation dates — use Alphabet's filings, not conference coverage
- Enterprise support and account management remain the historical objection against Google relative to AWS and Azure

## 04 GIP Context

**GIP:** No publicly disclosed GIP relationship. Google Cloud is near-certain to be present in some PortCos already, so the practical question is consolidated commercial terms rather than a first introduction.

**BlackRock:** No publicly disclosed operating relationship; standard index holdings of GOOGL/GOOG only.

**Others at Google:** Thomas Kurian (Chief Executive Officer, Google Cloud)
