## 01 Who You're Meeting

**C Vijayakumar** — Chief Executive Officer & Managing Director, HCLTech.**In role:** CEO since October 2016; Managing Director since July 2021**Today:** Runs HCLTech globally, with the Engineering and R&D Services business and the Advanced AI revenue line as the growth engines against a weak FY2027 outlook of 1–4% constant currency.

Known internally as CVK, he has spent nearly three decades at HCLTech and started on the infrastructure side, which explains where the company's strengths still lie. He joined in 1994 as part of the founding startup team of Comnet, a subsidiary later merged into HCLTech, and was instrumental in designing and implementing India's first fully automated trading network at the National Stock Exchange. He led the exponential growth of HCL's Infrastructure Services Business as its President, and incubated the products and platforms portfolio that became a billion-dollar business.

**Career:** Chief Executive Officer & Managing Director, HCLTech; Chief Executive Officer, HCL Technologies; President, Infrastructure Services Business, HCL Technologies; Founding startup team, Comnet (merged into HCLTech)**Education:** BE Electrical & Electronics Engineering, PSG College of Technology, Coimbatore; Executive Management Programme, Xavier School of Management (XLRI)**The company:** Delivered 3.9% constant-currency growth in FY2026 in what its CEO called an uncertain demand environment, with Advanced AI revenue crossing a \$620M annualised run rate. The segment that stands out is Engineering and R&D Services, which grew 9.8% — two and a half times the company average.**What they sell:** IT and business services, engineering and R&D services, and HCLSoftware products. The AI portfolio runs under AI Force and AI Foundry, with Advanced AI reported as a separate revenue line.

## 02 Where The Company Sits

The Engineering and R&D segment is the reason to look at HCLTech rather than its India-heritage peers for infrastructure work. It grew 9.8% in a year when the company grew 3.9%, which says clients with complex physical and product engineering problems are still spending while general IT discretionary demand is flat. That is the opposite of the pattern in most of this peer set.

## 03 Talking Points

- Infrastructure services is his home ground, not a talking point — the closest fit of any India-heritage CEO to asset-heavy operations.
- Engineering and R&D Services grew 9.8% against 3.9% company growth. He will know that is the strongest card in his hand.
- FY2027 guidance of 1–4% is the weakest in the peer set; there is commercial motivation to win portfolio-scale work.

**What to pressure-test about the company:**

- FY2027 guidance of 1–4% constant currency is the weakest forward outlook of any vendor in this wave
- The US, its largest geography, grew only 2.3% at constant currency
- Outsourcing costs rose from 13% to 14.2% of revenue, which pressures the margin advantage

## 04 GIP Context

**GIP:** No publicly disclosed GIP relationship. Engineering and R&D Services is the part worth testing against asset-level problems; the mainstream IT services business competes on the same ground as TCS, Infosys and Wipro.**BlackRock:** No publicly disclosed operating relationship.**Others at HCLTech:** Roshni Nadar Malhotra (Chairperson)[www.hcltech.com](http://www.hcltech.com) · [HCLTech leadership page](#) · [Indiaspora profile](#) · [Company LinkedIn](#)
