01 Who You're Meeting

Vimal Kapur — Chairman & CEO, Honeywell, Honeywell Forge.

In role: CEO since June 2023; Chairman since June 2024

Today: Leads the company as a pure-play automation business, having reshaped the portfolio through roughly \$14 billion of acquisitions and the separation of Honeywell's other segments.

A thirty-seven-year Honeywell insider who came up through process automation, which is exactly the ground Honeywell Forge sits on. He began his career in 1986 and joined a Honeywell joint venture in India in 1989, becoming Managing Director of Honeywell Automation India. He went on to lead Honeywell Process Solutions as President, steering it through an oil and gas downturn, then served as President and CEO of Performance Materials and Technologies from 2021 to 2022 and as President and Chief Operating Officer of Honeywell before taking the CEO role.

Career: Chief Executive Officer (Chairman from 2024), Honeywell; President & Chief Operating Officer, Honeywell; President & Chief Executive Officer, Performance Materials and Technologies, Honeywell; President, Honeywell Process Solutions, Honeywell

Education: Electronics engineering (instrumentation), Thapar Institute of Engineering, Patiala

The company: Currently mid-breakup: Honeywell is separating into standalone Aerospace, Automation and other businesses through 2026, which makes Forge's future scope and reporting lines a live open question — but it also has the best employee sentiment of any name on this list.

What they sell: Forge connects Honeywell's aerospace, building automation, process automation and industrial automation businesses into one AI-enabled operational-insight layer — conceptually close to Sand's cross-sector “control layer” pitch.

02 Where The Company Sits

Most similar to Sand in ambition — a cross-sector operational AI layer — but embedded inside a conglomerate that is actively being taken apart, adding real near-term uncertainty to the platform's trajectory.

03 Talking Points

- Process automation is his actual career, not a portfolio he inherited — a plant-floor conversation will land.
- He has personally managed through an industrial capex downturn; arguments about payback periods and operational savings will get a realistic hearing.
- The pure-play automation repositioning means Forge is now closer to the centre of the company than it was. Worth testing what that means for roadmap commitment.

What to pressure-test about the company:

- Real organizational uncertainty: Honeywell is actively splitting into separate public companies through 2026 (Aerospace spin-off, WWS and PSS sales)
- Forge-specific revenue, headcount and roadmap are not disclosed separately from the parent's segments
- AI/GenAI capability is described as “emerging” rather than a current core strength versus AI-native competitors

04 GIP Context

GIP: No connection found. Honeywell serves airports and industrial operators broadly, which overlaps with GIP's transport and energy portfolios in principle, but no named GIP asset was confirmed as a Forge customer.

BlackRock: Confirmed passive ownership — roughly 6.6% of Honeywell, per a July 2026 filing made under the newly separate “Honeywell Aerospace” filing entity, reflecting Honeywell's ongoing corporate breakup into standalone businesses.
