01 Who You're Meeting

Salil Parekh — Chief Executive Officer & Managing Director (term ends March 2027), Infosys.

In role: CEO since 2 January 2018; reappointed May 2022 for a term ending March 2027, with a named successor

Today: Leads Infosys' AI-first strategy, built around Topaz and Topaz Fabric and a six-area framework that includes physical AI — against FY2027 guidance of only 1.5–3.5% constant currency.

Twenty-five years at Capgemini and its predecessor before Infosys, which makes him one of the few Indian IT CEOs who came up outside the Indian majors. He began at Ernst & Young's consultancy in 1992, becoming a partner, and moved into Capgemini when it acquired that business in 2000. He rose to the Group Executive Board, was appointed deputy CEO in March 2015, and ran a business cluster covering Application Services and Cloud Infrastructure Services, latterly as CEO for the UK, North America and Asia and for global financial services.

Career: Chief Executive Officer & Managing Director, Infosys; Deputy CEO; CEO for UK, North America and Asia; Group Executive Board, Capgemini; Leadership roles across the US, UK, Europe and Asia, Capgemini; Consultant to Partner, Ernst & Young LLP (consultancy acquired by Capgemini)

Education: ME Computer Science and ME Mechanical Engineering, Cornell University; BTech Aeronautical Engineering, Indian Institute of Technology Bombay

The company: Crossed \$20B of revenue in FY2026 on 3.1% constant-currency growth, with \$14.9B of large deal wins — 28% higher than the prior year. AI revenue moved from 5.5% of total in Q3 FY2026 to 8.2% by mid-2026, the fastest ramp disclosed by any India-heritage firm tracked here.

What they sell: Application services, consulting, engineering and operations. The AI portfolio is Infosys Topaz, with Topaz Fabric as the platform layer and Cobalt for cloud. The stated AI strategy covers six areas: AI strategy engineering, data, process, legacy modernisation, physical AI, and trust.

02 Where The Company Sits

Two things distinguish Infosys for an infrastructure portfolio. First, physical AI is explicitly one of the six areas in its published AI strategy — no other firm in this peer set names it as a target market rather than a talking point. Second, Topaz Fabric is architected so clients can use different foundation models while keeping sensitive data inside their own environments, which Parekh calls a major differentiator and which matters for regulated operational data.

03 Talking Points

- A consultant by formation rather than a delivery operator — he engages on transformation design, not staffing ratios.
- Physical AI is one of six named areas in the strategy he set. Test how much of it is real by asking for asset-level references.
- His term ends March 2027 with a successor already named. Anything multi-year should involve the incoming leadership too.

What to pressure-test about the company:

- FY2027 guidance of 1.5–3.5% constant currency is among the weakest in this peer set
- Headcount fell 8,440 in Q4 FY2026 and attrition rose to 12.6%
- A CEO transition is under way, with Parekh describing a handoff in which the successor focuses on execution

04 GIP Context

GIP: No publicly disclosed GIP relationship. The physical AI strand of the strategy is the part worth testing directly against asset-level problems; the mainstream services business competes on the same ground as TCS, Wipro, HCLTech and Cognizant. Note the Anthropic partnership if model choice comes up.

BlackRock: No publicly disclosed operating relationship.
