Copilot paid seats

\$678B

Commercial RPO

01 Who You're Meeting

Amy Hood — Executive Vice President & Chief Financial Officer, Microsoft.

In role: CFO since 2013 — the first woman to hold the role at Microsoft

Today: Leads Microsoft's worldwide finance organisation — business operations, acquisitions, treasury, tax, global real estate, accounting and reporting, internal audit and investor relations — and steers the company's AI spending.

An investment banker turned operator, and Nadella's principal strategic partner for more than a decade. She joined Microsoft in 2002 from Goldman Sachs, where she worked in investment banking and capital markets, and held roles in investor relations, as chief of staff in the Server and Tools business, and running strategy and business development in the Business division — where she helped lead the transition to Office 365 and worked on the Skype acquisition. After the COO role was vacated she also took on worldwide licensing and pricing.

Career: Executive Vice President & Chief Financial Officer, Microsoft; CFO of the Business division; strategy and business development, Microsoft; Chief of staff, Server and Tools Business; investor relations, Microsoft; Investment banking and capital markets, Goldman Sachs

Education: MBA, Harvard University; BA Economics, Duke University

The company: Azure crossed \$100B of annual revenue for the first time in FY2026 and accelerated to 43% growth in Q4 rather than plateauing. Microsoft 365 Copilot passed 30 million paid seats, doubling in two quarters, against a commercial base of roughly 464 million seats — so penetration is still only about 6.5%.

What they sell: Azure cloud and AI infrastructure, Microsoft 365 and the Copilot family, Dynamics 365 for ERP and CRM, GitHub, Fabric for data, and the security portfolio. Nadella has stated Microsoft holds royalty-free frontier model IP rights through 2032.

02 Where The Company Sits

Microsoft is the default enterprise AI route for most organisations because the commercial relationship already exists — Copilot lands inside an enterprise agreement rather than requiring a new vendor selection. That is genuinely important for a portfolio programme: it is the lowest-friction path to individual productivity across PortCos, which is one of the three opportunity areas in the reference model. Two numbers deserve attention in any negotiation.

03 Talking Points

- Licensing and pricing sit with her. For a portfolio-wide Microsoft agreement she is the substantive counterpart, not the account team.
- Ex-Goldman investment banker — expect a rigorous, numbers-led negotiation and prepare accordingly.
- Free cash flow fell 23% in FY2026 while capex hit a record. She owns that tension and will have a considered answer.

What to pressure-test about the company:

- Free cash flow fell 23% while capex hit a record, with two thirds of that spend on assets Microsoft classifies as short-lived
- GAAP profit growth of 31% versus roughly 22% adjusted — the gap is a \$3.2B Anthropic investment gain, not operating performance
- From FY2027 Microsoft extends the useful life of data centres and office buildings from 15 to 25 years, which flatters future earnings

04 GIP Context

GIP: No publicly disclosed GIP relationship. Microsoft is near-certain to be present across multiple PortCos already through enterprise agreements, so the practical question is consolidated licensing terms rather than a first introduction.

BlackRock: No publicly disclosed operating relationship; standard index holdings of MSFT only.

Others at Microsoft: Satya Nadella (Chairman & Chief Executive Officer)
