01 Who You're Meeting

Abhijit Dubey — President & Chief Executive Officer, NTT DATA, Inc., NTT DATA.

In role: Leads NTT DATA's business outside Japan, following the merger of NTT Ltd into NTT DATA

Today: Runs the roughly \$30B international business created by combining NTT DATA's overseas operations with NTT Ltd — IT services, systems integration, and the group's data centre and network infrastructure.

A consultant and oilfield-services operator rather than a career IT services executive, which is an unusual profile for this seat and a relevant one for infrastructure. He was a Senior Partner at McKinsey & Company and a core leader of its Global Technology, Media and Telecommunications practice, advising the sector's largest operators on strategy and transformation. Before consulting he worked at Schlumberger Oilfield Services — genuine field experience in capital-intensive industry. He holds a master's degree from Stanford University and a B.Tech from IIT Bombay.

Career: President & Chief Executive Officer, NTT DATA, Inc.; Senior Partner; core leader, Global Technology, Media & Telecommunications practice, McKinsey & Company; Oilfield services, Schlumberger

Education: MS, Stanford University; BTech, Indian Institute of Technology Bombay

The company: Japan's largest IT services company and, after absorbing NTT Ltd, a combined business and technology services operation of roughly \$30B outside the group's domestic base. Unusually for an integrator, it sits inside a telecommunications group and carries real physical infrastructure alongside the services business.

What they sell: Systems integration, application and infrastructure managed services, and consulting — combined, since the NTT Ltd merger, with data centre and network infrastructure. R&D includes photonics-powered data centres that transmit data using light rather than electrical signals.

02 Where The Company Sits

NTT DATA's distinguishing feature for an infrastructure portfolio is that it is not purely a services firm — through the NTT group it owns data centre and network assets, and its research agenda includes photonics-based data centres using light rather than electrical signalling for transmission. That puts it on both sides of the digital-infrastructure conversation.

03 Talking Points

- Schlumberger then McKinsey TMT — he understands capital-intensive operations and telecoms infrastructure from both the field and the boardroom.
- NTT DATA owns data centre and network assets through the group, so clarify early whether you are talking to a supplier or a potential counterparty.
- He has publicly conceded the brand problem. That is leverage on commercial terms for a reference-able engagement.

What to pressure-test about the company:

- Brand recognition is the firm's own stated problem — it is frequently absent from Western vendor shortlists
- Operating margin of roughly 7% on group revenue is thin against Accenture or the India-heritage peer set
- Complex structure — group corporation, Japanese domestic entity and international entity — makes it harder to know which entity you are contracting with

04 GIP Context

GIP: No publicly disclosed GIP relationship. Worth noting the dual position: NTT group data centre assets make it a potential counterparty in digital infrastructure as well as a services supplier. Clarify which relationship is in play before engaging.

BlackRock: No publicly disclosed operating relationship.
