01 Who You're Meeting

Larry Ellison — Chairman & Chief Technology Officer, Oracle.

In role: Co-founded Oracle in 1977; CEO for more than three decades until 2014; Chairman and CTO since

Today: Sets Oracle's technical direction and remains the decisive voice on strategy, including the AI infrastructure bet and the capital programme behind it.

He co-founded Oracle in 1977 and ran it as CEO for more than thirty years before stepping back from day-to-day management in 2014, taking the Chairman and Chief Technology Officer roles rather than retiring. He describes a 26-year working partnership with Safra Catz that continues in her vice-chair role. He remains the person whose judgement determines Oracle's direction: he selected both co-CEOs and publicly explained the reasoning for each.

Career: Chairman of the Board & Chief Technology Officer, Oracle; Co-Founder & Chief Executive Officer, Oracle

The company: Remaining performance obligations reached \$638B at FY2026 close, up more than 6.5 times from \$98B two years earlier — signed, non-cancellable contracts giving Oracle more than a decade of visibility in its infrastructure business, against \$67.4B of actual annual revenue.

What they sell: Oracle Database, Fusion Cloud ERP and HCM applications, NetSuite, industry software including Cerner health records, and Oracle Cloud Infrastructure — now the growth engine and the reason for the capital programme.

02 Where The Company Sits

The RPO figure is the single most striking number anywhere in this app, and it cuts both ways. Oracle has effectively pre-sold roughly ten years of OCI capacity to the most capital-rich AI companies in the world, which makes the revenue ramp close to contracted if it can build and energise the capacity on schedule.

03 Talking Points

- Nominally CTO, effectively the decision-maker. Nothing strategic at Oracle happens against him.
- His inference-over-training thesis is the reason Oracle is taking this much balance-sheet risk. Engage with it directly rather than around it.
- Reserve for genuinely strategic conversations; the co-CEOs run the business.

What to pressure-test about the company:

- Negative free cash flow of \$23.7B in FY2026, with ~\$70B of net capex and ~\$40B of new debt and equity planned for FY2027
- Revenue recognition depends entirely on building and energising capacity on schedule — an execution risk, not a demand risk
- Extreme customer concentration: the backlog is dominated by a handful of AI labs whose own funding is not assured

04 GIP Context

GIP: No publicly disclosed GIP relationship. Oracle's ERP and database footprint makes it likely present at PortCo level for corporate systems. Separately, its data centre build-out makes it a significant demand driver in digital infrastructure — relevant to asset-side analysis, not just vendor management.

BlackRock: No publicly disclosed operating relationship; standard index holdings of ORCL only.

Others at Oracle: Clay Magouyrk (Co-Chief Executive Officer); Mike Sicilia (Co-Chief Executive Officer); Safra Catz (Executive Vice Chair of the Board)
